

AI STRATEGY & ENABLEMENT · SERVICE SHEET

ClickUp Adoption and Operating Model

A fixed-scope engagement that moves a team or portfolio company onto ClickUp as the system of record, with the operating model that *keeps it there*.

BRIEF

SHAPE	Fixed scope, fixed fee, one engagement at a time
DURATION	6 to 10 weeks, sized in Assess
FOR	Private-equity portfolio companies and growth-stage teams consolidating onto one workspace
MOVING FROM	Jira, Trello, spreadsheets, email and shared inboxes
LED BY	Brandon Wilburn, Principal

Where rollouts actually fail

ClickUp configures quickly, and most teams can stand up a workspace in a week. That is rarely where adoption breaks. It breaks underneath: no one owns the hierarchy, intake bypasses the system, automations pile up without owners, and leadership keeps asking for status in a spreadsheet because the dashboards cannot be trusted.

We treat ClickUp as the surface and the operating model as the work. Every decision about Spaces, Folders, Lists, statuses and fields is written down with an owner, so the next leader inherits **a playbook, not a mess**.

METHOD · FOUR PHASES

01 Assess WEEKS 1 TO 2 Map workflows, intake paths, reporting needs and the tools being retired.	02 Design WEEKS 2 TO 4 Workspace hierarchy, statuses, custom fields, permissions and governance rules, captured as a short operating playbook.	03 Adopt WEEKS 4 TO 8 One pilot team first, measured. Then rollout in waves with role-based training and named champions.	04 Sustain THROUGH DAY 90 Adoption metrics, a 30/60/90 review, and a named governance owner on the client side.
---	---	--	--

WHAT YOU KEEP

- Operating playbook for the workspace
- Configured, documented ClickUp hierarchy
- Automation register: owner, trigger, failure path
- Role-based training and champion network
- Adoption dashboard and 90-day review

WHY AN OPERATOR

Brandon Wilburn built a multinational R&D hub at Spirent Communications from inception to **70 engineers** across three programs: org design, processes, delivery cadence, and external delivery partners onboarded into one way of working. He led platform engineering adoption across product portfolios at Viavi Solutions and Spirent, and cleared enterprise-wide agentic development adoption through a **seven-dimension review**, measuring a **20 to 40%** throughput lift with DORA. Getting many teams onto one system is work he has done.

EXTENSION A

Automation and AI

Intake triage, status rollups, SLA and handoff rules, and AI-assisted summaries for leadership, using ClickUp Automations and ClickUp Brain. Each automation is documented so the team can run it after we leave.

EXTENSION B

Systems Integration

ClickUp connected to the systems already in place: CRM, Slack, GitHub, Google Workspace and finance tools. We decide the system of record for each object first, then build.
